

DATA SCIENCE FOR SOCIAL GOOD
PORTUGAL

Data Science for Good

The author was not able to come up with a decent sub-title for this talk. He hopes to make it up to you with nice slides and exhaustive use of emoji.

DS@Work | DSPT Day 2019
Porto, 25th October 2019

Expectation management

- DSSG PT does **not conduct groundbreaking research**.
- DSSG PT is **not a company**.
- DSSG PT is **often recruiting**, but for **unpaid positions**.
- DSSG PT, from a purely **technical standpoint**, is a rather **boring endeavour**.

However...

- DSSG PT always works on **real-life problems**.
- DSSG PT delivers not papers, not prototypes, but usable **Data Science products**.
- DSSG PT only works on one type of problems: **those that matter**.

Actually, think of us as a big pharma

An open **community** of **data scientists**, **data lovers** and **data enthusiasts** that wants to **tackle problems that really matter**. We believe in the **power of data to transform our society** for the better, for everyone.

Projects

1-3 months; **Deliverable**
(small, simple yet
able to bring value -
report, interactive
visualization,
predictive model,
etc)

Rotaract

A global organization

that empowers **students** and

young professionals to

create **positive change**

around the world.

Rotaract

Santo Tirso

Fundraising *Liga Portuguesa Contra o Cancro*

Meet with each council
and authorities to raise
awareness and
collaborations

Manage volunteers
(~100 across 3 days)

Collect and analyze
Contributions (20-25k)

Project's goals

- **Main goal:** Exploratory analysis of the fundraising data to find eventual patterns or anomalies.

- Which parishes donate more? Can we correlate it with anything? Is it stable over the years?
- What is the expected performance of a volunteer? Does it vary by year?
- What makes one volunteer perform better than another?
- Where is the fundraising more effective?

- **Deliverable:** Report that can be easily navigated and shown to relevant stakeholders

Descrição do Projecto

Nome do Beneficiário

Rotaract Club de Santo Tirso

Nome do Responsável

Filipa Castro, Presidente

Título do Projecto

Análise exploratória dos dados do Peditório Nacional para a Liga Portuguesa Contra o Cancro no concelho de Santo Tirso

Data de Início

Dezembro de 2018

Breve descrição do Beneficiário

O Rotaract Club é uma iniciativa sem fins lucrativos da ONG Rotary International, composto por jovens entre os 18 e os 30 anos de idade, que se dedica à prestação de serviços, tanto a nível local como internacional, assim como ao desenvolvimento profissional e pessoal dos respectivos membros, com o objetivo de formar futuros líderes, visando promover a paz e a compreensão mundiais. Assim, o Rotaract Club de Santo Tirso é baseado na comunidade Tirsense, tendo sido fundado a 18 de setembro de 2003

Objectivo do projecto

O objectivo do projecto é realizar uma análise exploratória dos dados no sentido de perceber eventuais padrões ao nível da forma como os fundos são recolhidos.

Descrição do Projecto

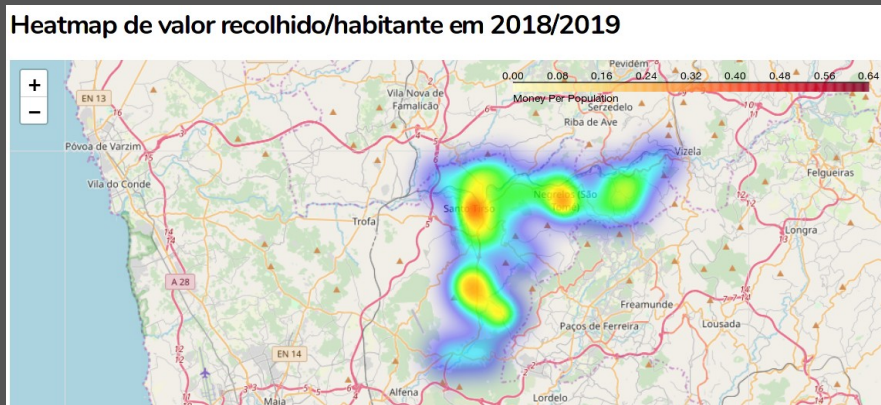

O objectivo do projecto é realizar uma análise exploratória dos dados do Peditório Nacional para a Liga Portuguesa Contra o Cancro no concelho de Santo Tirso realizado pelo Rotaract Club. Esta iniciativa angariou um total de aproximadamente 25000€ e contou com cerca de 200 voluntários.

Neste projecto, pretende-se perceber eventuais padrões ao nível da forma como os fundos

Deliverables shape Projects

- Started with the traditional `Jupyter Notebook` + `pandas` + `Matplotlib` analyses (several plot types).
- Iterating with Beneficiary led to interactive heatmaps, implemented with the `folium` package.

EXPLORATION

PRODUCTION

WASTED TIME

The ecosystem comes to the rescue

plotly

Powerful Javascript visualization library with a Python API. Syntax is very **verbose** and **un-Pythonic**.

```
import plotly.express as px
iris = px.data.iris()
fig = px.scatter(iris, x="sepal_width", y="sepal_length")
fig.show()
```

Recently launched high level Python API with a very **seaborn-like**, **pandas-friendly** interface

Dash

Build interactive webapps from Python/R (**no JS** and **minimal HTML/CSS**) with **plotly.express** **plots as first-class citizens**. Also, easy HTML embeddings!

Quick launch to production

From a standard Python project tree and with **heroku** configured:

```
# Create a Procfile, a 1-liner specifying  
entrypoint. Then:
```

```
$ heroku create a-dash-app
```

```
$ git push heroku master
```

```
$ heroku ps:scale web=1
```

```
# App available at a-dash-app.herokuapp.com
```

Take-home messages

- Fast growing ecosystem of seamlessly integrated tools (`voilà`, `panel`, `streamlit`) that accelerate **exploration** -> **production**.
- **Production is where the fun's at.** DS has **the most value** not in GitHub repos, but in **people's hands**.
- Lots of organizations doing good things would **benefit from even the simplest DS tools and algorithms**. Enter DSSG PT.
